PREFACE

THESE tables are designed to furnish the student beginning the use of logarithms with an instrument for calculation perfect as far as possible within the limits of four-figure accuracy. The theory of logarithms as taught in the preparatory schools should include some attention to the degree of accuracy attainable in logarithmic computation, and this volume will serve very well to illustrate these principles. The student will appreciate the utility of logarithms just in so far as he is confident of attaining the maximum accuracy of which the system admits.

The admirable work of Dr. C. Bremiker, *Tafeln Vierstelliger Logarithmen*, has been taken as the basis of the present set, which comprises two tables only, viz.:

Logarithms of Numbers from 1 to 2000, pages 2–5;

Logarithms of the Trigonometric Functions, pages 6–29; from 0° to 8° and 82° to 90° for every *one-hundredth*, and from 5° to 85° for every *one-tenth* of a degree.

The division of the degree into decimal parts has much to recommend it theoretically, and is also regarded with favor by many expert computers. In fact, a movement towards the adoption of such a system of subdivision is not only gaining headway in France and Germany, but is making itself felt in this country.

My acknowledgments are due my colleagues, Drs. W. A. Granville and E. R. Hedrick, for valuable assistance in reading proofs.

PERCEY F. SMITH.

SHEFFIELD SCIENTIFIC SCHOOL,
NEW HAVEN, CONN.,
January, 1902.
